

Post Data (http.client)

Description: Create a Python script that posts a new blog entry to `jsonplaceholder.typicode.com/posts`. The entry should have `title='New Entry'`, `body='This is a new post.'`, and `userId=1`. Print the id of the created post. Use `http.client` to connect to the server.

Input: None.

Output (without unit test): The id of the newly created post.

Output (with unit test):

```
connection called with: call('jsonplaceholder.typicode.com')
request called with: call('POST', '/posts', body='{"title": "New
Entry", "body": "This is a new post.", "userId": 1}',
headers={'Content-type': 'application/json'})
read called: b'{"id": 123}'
connection closed: call()
test attribute passed: 123 is equal to 123
```
