Response Header Extraction (http.client)

Description: Write a Python program that sends a GET request to
https://httpbin.org/response-headers?Content-Type=text/
html&Server=Domjudge and prints the value of the Server response
header. Use http.client module to solve this problem.

Input: None.

Output (without unit test): The server type returned in the response
headers.

Output (with unit test):

connection called with: call('httpbin.org')
request called with: call('GET', '/response-headers?Content-
Type=text/html&Server=Domjudge')
response headers: [('Server', 'MockServer')]
connection closed: call()
test attribute passed: MockServer is equal to MockServer
